

**Case 50 - Problems posed by isolated, but serious and worrisome esophageal symptoms**

Dear Colleagues,

The clinical case today is presented by Dr Georg Spaun from Linz ; it focuses on the problems posed by typically esophageal symptoms persisting long term, when the various attempts at making a diagnosis fail to give indisputable, final indications for treatment.

The course of action to be taken for this patient is still debatable, and that is why, this month, the discussion will remain open on the forum during the whole week.

The team seeking to manage this difficult case as well as possible, is today all the more expecting your suggestions and proposals for diagnosis as well as for treatment.

Sincerely yours,

R. Giuli, MD, FACS  
Professor of Surgery  
Director of the Executive Committee of the OESO Foundation

*Already mark the dates!*

The OESO 13<sup>th</sup> World Conference

**2015**

**August 31 (Monday) - September 3 (Thursday)**

**Monaco**

**"The Esophagiome"**

**Neuro-Mechano-Physiology in esophageal health and disease**  
*From technology development to clinics*

**Information & Events**

The 12<sup>th</sup> OESO Conference, held on August 27-30 at the emblematic setting of the UNESCO Headquarters, was the occasion of an exceptional gathering of key opinion leaders from all disciplines involved during four intense days in the interdisciplinary dissection of the theme of the congress:

**"Cancers of the esophagus, from normal mucosa to tumor.  
*Translating knowledge into cure*".**

The entire content of **70 hours of presentations** given in Grand Fora, Plenary Sessions, Symposia, Topic Fora, and Special Sessions, *including the entirety of the discussions*, has been captured during this event.

**It is now available in a DVD-Rom.**
